METAL DETECTOR – FOOD INDUSTRIES

Metal Detectors are utilized to ensure the safety of consumers. It helps to detect the food contaminated with metal. The metal detectors provided by us offer effective protection from ferrous and non-ferrous metals. Whenever a metal particle is detected or passes through the detector, it obstructs the electromagnetic field which causes a signal to be detected.

GRAVITY FEED METAL DETECTOR: It is widely applicable in industries for inspection of spices, grains, powders, flour, cereals, sugar, rice, and many more such products, as it is capable to quickly detect and extract the metal particles in such free-falling products.

FOOD LINE METAL DETECTOR: Our food metal detectors are applicable for diversified purposes, which include the inspection of bread and bakery products, dairy products, spices, sugar, fruits and vegetables, meat and sausage products, etc.
